Abstract (en)
[origin: WO2014040869A1] The present invention is in the field of hard surface treatment compositions; and in particular relates to hard surface treatment compositions to render a substrate hydrophobic and also repellent to aqueous stains and soils, as well as giving good cleaning on tough soils and stains. It is therefore an object of the present invention to provide easier cleaning upon the subsequent wash; also known as a next time cleaning benefit. It has been found that a composition comprising a solvent, a carboxylic polymer, a metal ion and a cationic surfactant and having a pH of between 2 and 6, provides both stain repellence as well as good primary and secondary cleaning.
