Abstract (en)

[origin: WO2014041317A1] The invention relates to a fluid flow valve comprising a movable closure member (2) and a body (4), comprising a projecting part (6) that receives the closure member (2). The body (4) is designed to be attached to a support (8) in such a way that the projecting part (6) is introduced into a housing (10) in said support (8). In addition, the body (4) is designed to allow the valve to be secured to the support (8) in a direction (T) transverse to a longitudinal direction (D) of extension of the projecting part (6). The invention is suitable for the recirculation of exhaust gases of motor vehicle engines.
