Abstract (en)

An amusement ride system is disclosed. The amusement ride system includes a support subsystem that includes a loading location, a first location, and a second location. The support subsystem includes a first anchor cable extending between the loading location and the first location and a second anchor cable extending between the loading location and the second location, with a first trolley movably attached to the first anchor cable and a second trolley movably attached to the second anchor cable. A trolley actuation subsystem moves the first trolley and the second trolley along the length of the first anchor cable and the second anchor, respectively. A swing subsystem includes a passenger carriage, wherein a first swing line is coupled to the passenger carriage and pivotally engaged to the first trolley and a second swing line coupled to the passenger carriage and pivotally engaged to the second trolley.
