Abstract (en)
[origin: CN104791654A] The invention provides a light fixture for supporting a lamp at two ends, the light fixture including a lamp holder which receives and supports a lamp socket arranged at a first end of a lamp, wherein the lamp holder includes lamp holder contacts which electrically connect with lamp socket contacts; and a support which receives and supports a support element arranged at a second end of the lamp, wherein the support mechanically supports the lamp in the light fixture and does not include electrical contacts, wherein the support is essentially pot-shaped, wherein two opposite face walls are arranged at a base of the support, wherein the face walls and the side walls define a receiving cavity which is accessible through an opening and which includes a push-in section arranged in front in a push in direction and a support section arranged in a rear in the push-in direction.
