Abstract (en)

[origin: US2015197977A1] The invention relates to a device for handling notes of value, comprising a head module and a safe module for accommodating a cash box. Further, the device has an intermediate module for transmitting a drive force of a drive unit of the head module to a cash box mechanism and/or to transport elements of the safe module. The intermediate module is designed such that it is adaptable to at least two different wall thicknesses of a wall of the safe module so that at least for these two wall thicknesses it can transmit the drive force from the drive unit to the cash box mechanism or the transport elements of the safe module.
