Abstract (en)
[origin: EP2897115A1] A remote control system includes a portable terminal (10), a server (12) that acquires position information of the portable terminal, and a control target apparatus (13) controlled from the server. The server stores a remote control execution area (30) that centers on a base (a user's home)(40) where the control target apparatus is set and a remote control execution check area (31) that centers on a position different from the base (the user's home) and does not overlap the remote control execution area. When the portable terminal exits the remote control execution check area, the server transmits a control execution check message for the control target apparatus to the portable terminal. When the portable terminal enters the remote control execution area, the server controls the control target apparatus according to presence or absence of a response to the control execution check message and content of the response.
