Abstract (en)
[origin: WO2014044296A1] The invention relates to a vacuum cleaner (10/100) comprising a dirt collection container (28) for vacuumed material, a suction unit (42), at least one filter element (50) arranged between the dirt collection container (28) and a suction chamber (46) in the flow direction of the air suctioned by the suction unit (42), a filter cover (54) which covers the filter element (50) on the clean-area side, at least one rechargeable battery (90), and at least one battery receiving area (92). The aim of the invention is to provide a more compact design and facilitate access to the filter cover (54). This is achieved in that the vacuum cleaner (10/100) has a battery cover (70) which covers the at least one battery receiving area (92) and which is arranged above the filter cover (54) when the vacuum cleaner (10/100) is positioned on a floor surface (66) in an operating position. The battery cover (70) can be converted from a closed position, in which the battery cover covers the filter cover (54), into an open position, in which a user can access the filter cover (54) from the clean-area side, and back.
