Abstract (en)  
[origin: WO2014044737A1] A stroller (2) comprises a first wheel assembly (6), a second wheel assembly (4), and a handle bar assembly (10). Each one of these assemblies are configured for connection to respective ones of individual first (231), second (251) and third (21) rotatable elements (231, 251, 21) of a folding mechanism (18). The rotatable elements are rotatably supported by a common axle (35). A leverage element (38) is rotatably supported by a leverage axle (36) which is supported by the third rotatable element (21) and arranged in a parallel relationship with the common axle (35); the leverage element further comprising an axle slot (381) for accommodating movement the common axle (35). The leverage element comprises two pins (382, 383) where the first pin (382) is rotatably supported by the first rotatable element (231) in a receptacle (232) arranged at a first distance (d1) from the common axle (35), and the second pin (383) is rotatably supported by the second rotatable element (251) in a second receptacle (252) at a second distance (d2) from the common axle (35).
