Abstract (en)

[origin: WO2014044613A1] The invention relates to a trailer truck (1) for the transport of ISO containers (12), comprising a traction machine (1a) and a semi-trailer (1b) that can be coupled thereto, at least one electric drive motor (9) which is arranged in the traction machine (1a) and is supplied with energy by a battery (8) disposed in the trailer truck. In order to provide an improved fully electric loading and unloading plant device, it is proposed that the battery (8) is disposed in the traction machine (1a), that the battery (8) is detachably connected to the traction machine (1a) for charging the battery (8) outside of the traction machine (1) and that it can be displaced in and out of the traction machine (1a) and is replaceable by a charged battery (8).
