Abstract (en)

[origin: WO2014044253A1] The invention relates to a lifting pillar segment (211, 311, 313) for floating bodies, in particular for lifting ships or platforms, having a means for absorbing pressure in a pressure direction (231), a means for absorbing tension acting counter to the pressure direction (233), and a segment coupling receptacle and a counter-segment coupling receptacle (215) opposite the latter, by means of which further lifting pillar segments (315) for floating bodies can be flanged on, wherein the lifting pillar segment for floating bodies is configured in such a way that a floating body (101) to be lifted or supported has a mass of more than 100 tonnes, in particular more than 1,000 tonnes, preferably more than 5,000 tonnes, quite particularly preferably more than 10,000 tonnes.
