Abstract (en)

[origin: WO2014044709A1] The invention relates to a wall structure for interior insulation systems having thermally insulating panels, wherein the thermally insulating panels are fastened to an existing or newly attached layer having capillary action on site on the wall side with a defined gap width and the gaps are filled up with a layer having capillary action, and the side of the thermally insulating panels facing the room interior are also covered with a layer having capillary action, and thus the thermally insulating panels are surrounded on all sides by said layers having capillary action.
