Abstract (en)
[origin: WO2014044580A1] The invention relates to a refrigerator (100) comprising at least one container (104) arranged in the interior (102) of the refrigerator (100) for receiving products to be refrigerated. The container (104) has a main part (200) and a door (106, 108) which is movably mounted on the main part (200) and by means of which the container (104) can be opened or closed by moving the door (106, 108). According to the invention, a drive device (316) is operatively connected to the door (106, 108) in order to move the door (106, 108). The invention further relates to a container (104) for arranging in an interior (102) of a refrigerator (100), wherein the container (104) has a main part (200) and a door (106, 108) which is movably mounted on the main part (200) and by means of which the container (104) can be opened or closed by moving the door (106, 108), and a drive device (316) is operatively connected to the door (106, 108) in order to move the door (106, 108).
