Abstract (en)

[origin: EP2711666A1] A modeling device is used for obtaining parameters for producing an embossing roller set. The modeling device is equipped with a test bench having a pair of rollers which are provided under hydraulic pressure in order to determine the parameters for producing the embossing rollers from the measurement data. The measurement data is used for determining the geometry of surface of backing roll of embossing roller set. An independent claim is included for a model device for producing a set of embossing rollers.
