Abstract (en)

[origin: US2014088820A1] A system of computers, wireless networks, and vehicle-based location sensors allows real time display of equipment location, utilization, and expected arrival times for mobile vehicles. Display of location by load status and expected arrival time allows monitoring of not just vehicle location but the impact on queue times at loading and unloading endpoints allowing for equipment reallocation. Overhead map views of actual location including hazard locations and queries for vehicle and operator status are also supported.
