Abstract (en)
[origin: WO2014044825A2] The invention relates to a safety reporting network 1 having a local area monitoring network 2 for a monitoring object 3, wherein the at least one local area monitoring network 2 has at least one monitoring camera 7, wherein the monitoring camera 7 is designed to output an event notice E, having a first network 5 and a central safety control device 13, wherein the local area monitoring network 2 is connected to the central safety control device 13 via the first network 5 for the purpose of data interchange, wherein the event notice E is transmitted to the central safety control device 13 via the first network 5, having a second network 18 and at least one agent device 19 that is connected to the central safety control device 13 via the second network 18, wherein the event notice E or an event notice E' processed on the basis of the event notice is transmitted to the agent device 19 as an alarm notice A, wherein the safety reporting network 1 has a plurality of local area monitoring networks 2, wherein the plurality of local area monitoring networks 2 are associated with different monitoring objects 3.
