Abstract (en)
The invention concerns a bath lift device (1) for raising and lowering persons into or out of a bathtub comprising two independent parts that can be easily separated: - a fixed part (10) including a chassis (11-14) adapted to rest, in use, on a floor of the bathtub, said chassis (11-14) comprising two tubular upright elements (11) parallel to each other, extending, in use, in a close to vertical direction, - a moveable part (20) including a seat frame (21) supporting a seat plate (22) and a backrest (23), said seat frame (21) being moveable upward and downward relative to the chassis (11-14) via a lifting means (24) and being slideably mounted onto said two upright elements (11), characterized in that said two upright elements (11) are joined by a lateral element (12), said lateral element (12) consisting in a curved tubular element (31) connected at its ends (32) to the two upper ends of the upright elements (11), said tubular element (31) being shaped so as to define an upper open area (33) permitting the sliding upward displacement of the moveable part (20).
