Abstract (en)
The present invention relates to a perimeter sealing component (10, 20) for attaching floor and wall insulations to corners of a room, the perimeter sealing component (10, 20) comprising a first portion (11, 21) extending in a first direction, the first portion (11, 21) having a first surface, which is adapted to be attached to a first wall of the room. The perimeter sealing component further comprises a second portion (12, 22) extending in a second direction, which is different from the first direction, the second portion (12, 22) having a first surface, which is adapted to be attached to a second wall of the room. In order to avoid capillary channels between a perimeter wall and the perimeter sealing, the perimeter sealing component (10, 20) comprises a substantially rigid, pre-defined shape, which is adapted to cover the corner of the room.
