Abstract (en)
[origin: WO2014062182A1] An oral care system including an elongated member having tooth cleaning elements and a store of oral care material. In one aspect, the invention can be a toothbrush comprising: a handle; a through-slot extending through the handle; an elongated member rotatably coupled to the housing for rotation about a rotational axis, the elongated member comprising: a toothbrush head located on a first side of the rotational axis; and a dispenser comprising a store of oral care material located on a second side of the rotational axis; a plurality of tooth cleaning elements extending from the toothbrush head; the elongated member rotatable about the rotational axis between: (1) a first state in which the toothbrush head protrudes from the handle while the dispenser is nested within the through-slot; and (2) a second state in which the dispenser protrudes from the housing while the toothbrush head is nested within the through-slot.
