Abstract (en)
[origin: WO2014048414A1] The invention relates to a method for producing an electrical contact element, wherein the contact element is formed substantially from a main body and said main body undergoes the following method steps in the sequence listed: a. degreasing of the surface, for example cold degreasing and/or hot degreasing and/or electrolytic degreasing, b. flushing to remove chemical residues which may be present, c. activation of the surface, d. deposition of a nickel layer, e. further flushing to remove chemical residues which may be present, f. deposition of a nickel alloy, g. further flushing to remove chemical residues which may be present, h. deposition of a gold layer or of a gold alloy.
