Abstract (en)  
[origin: WO2014048908A1] The invention relates to a wall formwork (1) for concrete structures, comprising a basic body (12), an outer face configured as a formwork facing (19), and anchor holes (5) for the detachable connection to other wall formworks. It is proposed that the anchor holes (5) be disposed with a substantially uniform grid spacing (4) relative to each other, and to dimension the wall formwork (1) in such a way that the spacing (4) of the anchor holes (5) to the outer vertical (7) and/or horizontal (6) boundary of the wall formwork (1) corresponds to no more than half of the grid spacing (4), preferably substantially half of the grid spacing (4).
