Abstract (en)  
[origin: WO2014048625A1] The invention relates to a gearbox unit (1), particularly for a wind power plant, having a first planetary stage (2) on the drive side, a second planetary stage (3) and a third planetary stage (4) on the output side, which are coupled to one another in such a manner that a torque on the drive side can be apportioned to the first and second planetary stages (2, 3) and recombined in the third planetary stage (4). According to the invention, the planetary stages (2, 3, 4) have a common gear carrier (20) which is mounted rotatably about an axis of rotation of the gearbox unit (1).
