Abstract (en)

[origin: WO2014048732A1] The invention relates to a bearing bushing (18, 19) which is designed for mounting a structural part (20) on a component (8) of a domestic appliance, and the bearing bushing (18, 19) has a rear connecting region (23) which is intended for introducing into an aperture (14 to 17) in the component (8) of the domestic appliance and on the front of which is formed an abutment flange (21) for striking against an upper side of the component (8) of the domestic appliance, wherein the connecting region (23) has a fitting element (24), by means of which the bearing bushing (18, 19) can be fitted in on a periphery (14a) of the aperture (14 to 17), and can be pivoted about the fitting for final installation in the aperture (14 to 17). The invention also relates to a domestic appliance (1) having a bearing bushing (18, 19).
