Abstract (en)

[origin: WO2014052787A1] A device receives an input associated with a program code being created or edited, and determines whether to perform an evaluation on the program code based on the input. The device waits for another input to be received when the evaluation is not to be performed, and performs the evaluation on the program code to generate a result, when the evaluation is to be performed. The device determines whether to display the result, waits for the other input to be received when the result is not to be displayed, and provides the result for display when the result is to be displayed.
