Abstract (en)
[origin: EP2901875A1] The invention relates to a covering for the absorption of pressure. The covering comprises a plurality of projections (62) having a micro crater (64) at the top. The projections (62) are preferably built in such a way that the wall(s) (68) of the micro crater (64) bend(s) inwards under pressure and fills the recess (70) of the micro crater (64). In order to achieve this effect, the projections (62) are preferably built in a pyramidal tapered shape with an average outer angle of the outer surface of more than 97° with respect to a base surface of the projection (62). The projections (62) preferably have a jagged outer and/or inner surface. The invention further relates to a garment, in particular a glove, with such a covering.
