Abstract (en)

[origin: EP2901890A1] The present invention relates to a drawer system containing an outer frame and at least one drawer which further contains at least one optical fibre leading from the outer surface of the outer frame through the wall of the outer frame, and through at least one wall of the drawer. The optical fibre is interrupted at the entry and at the exit to/from the construction material of the wall of the drawer, and the sections of the optical fibre are positioned in the walls of the frame and of the drawer so that at the interrupted ends the sections of the optical fibre (3) connect to each other when drawers are closed. The present invention further relates to the method of illuminating the interior part of the drawer system.
