Abstract (en)
[origin: WO2014053506A1] The invention relates to a system (1) for binding shoes to a touring snowboard (3) comprising two longitudinal board sections (3a, 3b), said binding system (1) comprising: a base (5); a first interface (7) attached to the snowboard (3) comprising, in particular, two independent half-interfaces (7a, 7b); and a second interface (9) placed on the base (5) and attached to the first interface (7), such that each half-interface (7a, 7b) includes at least one coupling element (11), the second interface (9) includes at least two openings (90) for receiving and blocking the coupling elements (11), and the second interface (9) also comprises at least one locking system (13) for locking at least one coupling element (11) in its associated reception and blocking opening (90).
