Abstract (en)

[origin: WO2014053457A1] The invention relates to a method for determining the capacity of remaining use of a part of a motor vehicle. Said method comprises the following steps: a step of determining a state of wear of a part of a vehicle; a step of calculating, according to the state of wear and the type of part, the remaining distance that can be covered before the part is fully worn; a step of calculating the remaining period of use before the part should be replaced, according to the remaining distance to be covered and an average distance covered per year by the vehicle.
