Abstract (en)
[origin: WO2014053793A1] The invention relates to a method for assembling a device (100) for packaging a cosmetic product, said device comprising: • - a glass container (101), said container having an opening (103), one edge (104) of said opening forming a bead (105); • - a closure piece (108) having a base (109) with a shape substantially complementary to that of the opening in the container; • - a locking piece (122); • - the closure piece (108) is mounted on the glass container (101) by elastic fitting of the side walls around the bead, by moving the bead in translation towards the base of the closure piece, said elastic fitting ensuring sealed contact between the closure piece and the edge of the container; • - the locking piece (122) is force-fitted around the side walls of the closure piece.
