Abstract (en)

[origin: EP2712950A1] The present invention relates to a method for controlling a laundry washing machine (1) comprising a washing tub (3) external to a washing drum (4) designed to contain the laundry (10). The method comprising the steps of performing a starting continuous water supply in the tub (3)/drum (4), so that a prefixed amount of water in the tub (3) is loaded after the water supply operation has been completed, sensing water levels (WL1,W12) in the tub (3) two or more times, at prefixed intervals (#t1), one another, detecting a siphon phenomenon based on sensed water levels (WL1,W12); and performing an intermittent draining of the water from the tub (3) to cause the siphon phenomenon to be deactivated, when the siphon phenomenon has been detected.
