Abstract (en)
[origin: WO2014075960A1] A system for track-bound transportation of objects comprises a plurality of rail cars (1, 1') which can be coupled to one another and each have at least one transportation belt (6) on which the objects can be moved along the rail car (1, 1') and which is embodied in such a way that the transportation belts (6) of rail cars (1, 1') which are coupled to one another adjoin one another, wherein transportation bodies (8) for the objects are provided, said bodies being formed from one rail car to another rail car in order to permit transportability along transportation belts which adjoin one another. At least one of the rail cars has a transfer module (13) with an extraction device (14) for extracting the objects from the transportation bodies (8).
