Abstract (en)

[origin: WO2014029866A2] The invention provides a structural element in a building comprising a building section, a base element, a console, and a cover. The base element is two-sided and arranged with a first edge in a longitudinal direction along the building section such that a first side forms a sidewall and a second side forms a bottom of a channel. The console is attachable to the sidewall and the bottom. Furthermore, the console has suspension means for supporting the cover.
