Abstract (en)
[origin: WO2014037551A1] The invention relates to a slot drain for surface drainage. Said drain comprises a channel element with an upper part that has a slot-type inflow opening and a connecting device (20) for the flush connection of two adjacent channel elements at their end faces. To simplify installation and improve alignment, according to the invention the connecting device (20) can be inserted into the inflow opening of two adjacent upper parts such that said device spans the parts.
