Abstract (en)

[origin: WO2014053429A1] The invention relates to an electrical contact device of the contact finger type with a strong nominal current between a first part (10) which is conductive and a conductive surface (26) of a second part (11) comprising a flexible pin (22) connected to a first element for mechanical and electrical connection to the first part (10), a contact part (12) applied to the conductive surface of the second part (11) and at least one metal contact blade arranged on a first end between a first end of the flexible pin (22) and the first part (10), wherein the flexible pin (22) is conductive and wherein the at least one metal blade (21) is connected, by the second end thereof, to the second end of the flexible pin (22) by means of a second element for mechanical and electrical connection (24).
