Abstract (en)
[origin: US2015226160A1] An internal combustion engine may include at least one camshaft that may have an outer shaft and an inner shaft that is adjustable relative to the outer shaft. At least one first cam may be fixedly connected to the outer shaft for actuating an outlet valve. At least one second cam may be fixedly connected to the inner shaft. The at least one second cam, in an activated angular position, may enable an internal exhaust gas recirculation via actuating the outlet valve.
