Abstract (en)
[origin: CN104835678A] To improve the quality of epoxy overmoulding of a vacuum interrupter (1), a thin wall of a cap (61,62) of a ceramic tube (4) comprises a side wall (71,72) extended along an axis (AA) of the interrupter (1) and a bottom wall associated with a cover (261,262) for surrounding them. Thereby, the thermal inertia of a metallic means for enclosing the ceramic tube is increased.

Abstract (fr)
Afin d'améliorer la qualité du surmoulage en époxy d'une ampoule à vide (1), les parois fines des couvercles (6 1 , 6 2) du tube céramique (4), comprenant une paroi latérale (7 1 , 7 2) s'étendant le long de l'axe (AA) de l'ampoule (1) et une paroi de fond, sont associés à des capots (26 1 , 26 2) qui les entourent. L'inertie thermique des moyens de fermeture métallique du tube céramique (4) est ainsi augmentée.
