Abstract (en)  
[origin: WO2014056481A1] The invention relates to a massage device (1) comprising at least one rubber-elastically deformable wall (2), and at least one actuator (3) that is arranged and configured, for the purpose of acting on a sub-region of said elastically deformable wall (2), so as to deform same. The invention is characterised in that the actuator (3) is formed with an electro-active polymer and in that the actuator (3) is electrically connected to a control unit (4) arranged in or directly on the massage device (1), and may be actuated by means of said control unit (4).
