Abstract (en)

[origin: CN203212229U] The utility model relates to a crane with at least one crane beam. The crane is provided with at least one crane beam (2) which extends horizontally in a vertical direction (LR) and is designed as a truss. The crane beam comprises a pillar (5) which connects an upper string beam (3) and a lower string beam (4) and is designed in a plane shape, wherein a crane trolley with a lifting device can move on the crane beam. In order to provide the crane (1a, 1b), in particular a bridge crane or a bridge crane, at least one gap (5e, 5i) is arranged on a first or second pillar end (5g, 5h) of the pillar (5), and the upper string beam (3) or the lower string beam (4) leans against the gap.
