Abstract (en)
[origin: WO2014056578A1] The invention relates to a cylinder head device (12) for an internal combustion engine, having a cylinder head (10) comprising at least one first receiving area (16), arranged on an inlet side (14) of the cylinder head (10), for at least one first camshaft (18) to be mounted on the cylinder head (10), and having at least one second receiving area (28), arranged on an outlet side (26) of the cylinder head (10), facing away from the inlet side (14), for at least one second camshaft (30) to be mounted on the cylinder head (10), wherein the receiving areas (16, 28) are separated from each other, at least in some areas, by means of at least one intermediate wall (32) of the cylinder head (10) that is arranged between the receiving regions (16, 28), at least in some areas, wherein at least one conduit element (34), via which at least one element (56, 64) of the cylinder head device (12) can be supplied with lubricant, extends in the intermediate wall (32).
