Abstract (en)
[origin: EP2703757A1] The method involves recovering a fraction of liquid with higher oxygen content from a high-pressure separating column (S1) of the distillation column system (S) for the production of liquid oxygen product (LOX). The liquid is guided out of the air separation plant. The fraction of liquid with reduced oxygen content in the low pressure separating column (S2) of the distillation column system is removed for production of GOX. The mixing column pressure in the mixing column (S3) is evaporated against the mixing column air. The gas from the air separation plant is led out. An independent claim is included for air separation plant.
