Abstract (en)
A device (1) for the support of shelves and the like, comprising at least a self-supporting base element (2), having a tubular shape and defining a rear area (2c) intended to be fixed to a support wall, a front area (2a) opposite the rear area (2c) and at least a pair of lateral areas (2b) positioned between the rear area (2c) and the front area (2a) and arranged transversely to the same, the base element (2) having anchoring means (3) of at least a support element (4) of a shelf or the like, at least an electrified connecting element (6) associated with the base element (2), at least an electrical connector (7) movably associated with the connecting element (6) to allow the electrical connection to at least an electrical source (L) associated with the shelf, where the anchoring means (3) are defined onto at least one of the lateral areas (2b) where the front area (2a) has at least a through opening (16) adapted to allow the access to the rear area (2c) and defines at least a seat (5) for the removable insertion of the connecting element (6).
