Abstract (en)

[origin: WO2011120845A1] The invention relates to a device for safeguarding a lock (10) against manipulation, which lock (10) has at least one locking element (11) which, through an opening (12) in a lock case front (13) of the lock (10), can be moved out of the lock (10) into a locking position and back into the lock (10) into an open position. According to the invention, it is provided that at least one safeguarding element (14) is arranged on the locking element (11), and this therefore means that a gap (15) formed between the locking element (11) and the opening (12) is covered over.
