Abstract (en)

A method for producing a positive electrode for a secondary battery, including the steps of: applying a slurry for a positive electrode material layer onto a current collector, and drying the applied slurry to form a positive electrode material layer, the slurry for a positive electrode material layer containing a fluorine-containing polymer, a positive electrode active material, and a dispersion medium; and applying a slurry for a surface layer onto the positive electrode material layer, and drying the applied slurry, the slurry for a surface layer containing a particulate acrylic polymer, a water-soluble polymer, and water, and having a content ratio of the particulate acrylic polymer and the water-soluble polymer in a total solid content of 60% by weight to 95% by weight.
