Abstract (en)
[origin: WO2014060188A1] In order to provide a bed which is equipped with an extendable-length bed frame, allows simplified handling and can be converted to the extended or the retracted use state by only a small number of manipulations, the invention proposes a bed which is distinguished by a side attachment which is designed for arranging on an inner-side-lengthening section which, in the extended state of the bed frame, projects out of the cavity of an outer side, wherein the side attachment, at least on the outside of the bed frame, has an outer contour which corresponds to the outer contour of the outer side.
