Abstract (en)

[origin: WO2014062362A1] Soft solid antiperspirant compositions and methods of preparing a soft solid antiperspirant composition are provided herein. The soft solid antiperspirant composition includes a hydrophobic carrier, an antiperspirant active component, a nucleating component, and a gellant. The nucleating component includes soy wax, and the gellant includes a C14 to C18 fatty alcohol component. The soft solid antiperspirant composition has a hardness of from about 10 to about 110 grams force. A method of preparing a soft solid antiperspirant composition includes combining a hydrophobic carrier, an antiperspirant active component, a nucleating component including soy wax, and a gellant including a C14 to C18 fatty alcohol component to form a gellant pre-mix, followed by heating to a melt temperature sufficient to melt the nucleating component. The heated antiperspirant pre-mix is mixed to form an antiperspirant composition, which is transferred into a receptacle to form the soft solid antiperspirant composition.
