Abstract (en)  
[origin: WO2014060064A1] A method for the surface treatment, in particular refinement, of a filter medium (14) for the at least partial cleaning of fluids, wherein the filter medium (14), consisting of at least one filter material, is treated in at least one surface region, is characterized in that, in the respective surface region, at least one kind of particles are deposited on at least one filter material by means of a chemical vapour deposition process, and in that at least one property of the filter material (14) can be predetermined, at least in the respective surface region, by the deposited particles.
