Abstract (en)  
[origin: WO2014064021A1] The invention relates to a method for preparing a supporting means for an application in an elevator system, wherein the supporting means comprises a plurality of tension-bearing elements arranged parallel to each other and a jacket, and wherein the tension-bearing elements are substantially surrounded by the jacket, comprising the following steps: pre-finishing a first supporting means end in such a way that the tension-bearing elements can be directly electrically contacted by a contacting device at the pre-finished point, wherein the pre-finishing occurs before the supporting means is transported to the elevator system.
