Abstract (en)
[origin: WO2014057175A1] The present invention concerns a panel (1) made from an insulating material, provided with a recess (60) built into said panel (1) and traversing the thickness of same. The size and volume of this recess (60) are designed to receive a curable hydraulic binder and/or a mechanical reinforcing member. The recess (60) is linked to a cutting line made from a first outer face (2) of the panel (1) to an inner face of the recess. The panel comprises, from the first outer face of the panel to the other, diametrically opposite, face (3), isothermal inner locking means against the thrust exerted by the curable hydraulic binder, which extend from the first outer face (2) on the inside of the panel to the other, diametrically opposite, face (3).
