Abstract (en)  
[origin: WO2014060435A1] The invention relates to a pivot unit (10) that has a pivot part (12) that can pivot from a first rotational end position into a second rotational end position and has a drive (16), which is provided in a housing (14), for pivoting said pivot part (12). A retaining element (50) that can be moved transversely to the direction of rotation of the pivot part (12) is provided in such a way that, when a rotational end position has been reached, said retaining element (50) is moved from a releasing position into a retaining position and the pivot part (12) is thereby held in the rotational end position.
