Abstract (en)  
[origin: WO2014060458A1] A flange (10) for separably connecting a pipe (16) to a connection block (18) is designed as an interrupted ring with an inner and an outer edge (30, 32) and has an under side (14) designed for mating against the connecting block (18) and against the pipe (16) and an upper side (12) opposite the under side (14), designed to mate with fasteners for fastening the flange (10) on the connection block (18). The flange (10) is characterized in that an outer contact web (28) projecting from the under side (14) in the region of the outer edge (32) is provided for the connection block (18) and an inner contact web (26) projecting from the under side (14) in the region of the inner edge (30) is provided for the pipe.
