Abstract (en)
The present invention relates to a flushing system, which is used with toilets, has an easily cleanable body (2) (inner chamber), provides dispersion by using the volumetric weight of the water itself in order to direct water, uses the concave form of the body (2) (inner chamber) sides for directing (guiding) the water, directs the water through the main hole that is wide towards the sides, and can perform the flushing tests completely by using splash hole.
